

### When Standards are High Training is Priceless

The CSS comprehensive crane operator training program includes both classroom and hands on training for all types of lifting applications. The program is geared toward your particular facilities lifting apparatus including specifics dealing with but not limited to:

- i. Electric overhead cranes and components
- ii. Lifting apparatuses
- iii. Basic equipment inspections
- iv. Proper operation of lifting equipment

#### PHASE I - Classroom Training - Handling of Heavy Loads

Basic instruction on the routine handling of heavy loads with emphasis on the severity of potential hazards.

- i. Basic electric overhead cranes and their components
- ii. Various lifting apparatus and attachments - their basic designs, purpose and capabilities of same
- iii. Simple pre-use inspection and reporting procedures

**NOTE:** Each participant in the training course will be provided with a Training manual in Crane Operations, for their use both during and after the session.

#### PHASE II - Hands On Demos and Safety Practices

Actual step-by-step demonstration and instruction of your crane operations with emphasis on proper operating practices and procedures.

#### PHASE III - Questions and Answers

Key personnel will have an opportunity to review and address any additional concerns.

Upon completion of the program, each attending the course will receive a certificate for the crane training course.
